Why **MOTTO**

2

FAST AND SIMPLE ASSEMBLY

The package includes the base with pre-attached wheels secured by bolts. Simply mount the wringer support on the base and attach the handlebar using the convenient green clips provided. The entire process takes just a few minutes. An assembly manual is included.

EASY TO TRANSPORT

The trolley's bulk can be reduced thanks to stackable buckets and a detachable handlebar, making it ideal for transportation in limited spaces.

COMPACT

The compact design also results in optimized packaging. Each box contains all the necessary components for one trolley, and thanks to its reduced size compared to the previous model, more units can be transported per pallet, optimizing storage space.

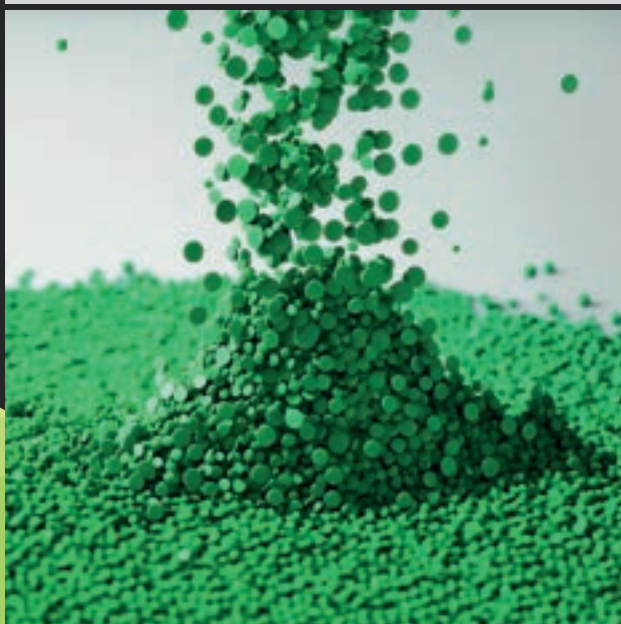

ERGONOMICS

Our designers have studied the optimal height for the push handle. The height is designed to best suit individuals between 150 and 180 centimeters tall.

FUNCTIONAL

The 25-litre buckets have a 22% wider opening compared to the previous '2P' model, making mop insertion easier.

RECYCLED PLASTIC

The base and buckets are made from recycled plastic. The single 15- and 25-litre buckets have a declared plastic percentage of 78%. The various trolley configurations, on the other hand, have a declared recycled plastic percentage of 37%.

The percentages are calculated based on the recycled material's impact on the total trolley weight.
